

South Sudan

The Government of South Sudan reports as follows.

National coordination

There is no written national strategy or plan that focuses exclusively or primarily on the prevention and control of viral hepatitis.

There is a designated governmental unit/department responsible solely for coordinating and/or carrying out viral hepatitis-related activities: Emergency Preparedness and Response Department. It has five staff members. It is not known how many people work full-time on hepatitis-related activities in all government agencies/bodies.

The government does not have a viral hepatitis prevention and control programme that includes activities targeting specific populations.

Awareness-raising and partnerships

The government did not hold events for World Hepatitis Day 2012 and has not funded other viral hepatitis public awareness campaigns since January 2011.

The government does not collaborate with in-country civil society groups to develop and implement its viral hepatitis prevention and control programme.

Evidence-based policy and data for action

There is routine surveillance for viral hepatitis. There is a national surveillance system for the following types of acute hepatitis: B, C and E, but not for any type of chronic hepatitis.

There are no standard case definitions for hepatitis. Deaths, including from hepatitis, are reported to a central registry. The percentage of hepatitis cases reported as "undifferentiated" or "unclassified" hepatitis is not known.

Liver cancer cases are registered nationally, but cases with HIV/hepatitis coinfection are not.

The government does not publish hepatitis disease reports.

Hepatitis outbreaks are required to be reported to the government and are further investigated. There is inadequate laboratory capacity nationally to support investigation of viral hepatitis outbreaks and other surveillance activities.

Population (in millions) (2011)	--
Country classification (2012)	Lower-middle-income
Gross national income per capita (PPP int \$) (2011)	--
Total health expenditure as % of GDP (2010)	--
Per capita total health expenditure (PPP int \$) (2010)	--
Per capita government health expenditure (PPP int \$) (2010)	--
Life expectancy at birth (in years) (2009)	--
Human Development Index (2011)	--
Median age (in years) (2010)	--
Total fertility rate per woman (2010)	--

There is no national public health research agenda for viral hepatitis. Viral hepatitis serosurveys are not conducted regularly.

Prevention of transmission

There is no national policy on hepatitis A vaccination.

The government has not established the goal of eliminating hepatitis B.

It is not known what percentage of newborn infants nationally in a given recent year received the first dose of hepatitis B vaccine within 24 hours of birth or what percentage of one-year-olds (ages 12–23 months) in a given recent year received three doses of hepatitis B vaccine.

There is no national policy that specifically targets mother-to-child transmission of hepatitis B.

There is no specific national strategy and/or policy/guidelines for preventing hepatitis B and hepatitis C infection in health-care settings.

There is no national policy on injection safety in health-care settings. Single-use or auto-disable syringes, needles and canulas are always available in all health-care facilities.

Official government estimates of the number and percentage of unnecessary injections administered annually in health-care settings are not known.

There is no national infection control policy for blood banks. All donated blood units (including family donations) and blood products nationwide are screened for hepatitis B and hepatitis C.

There is no national policy relating to the prevention of viral hepatitis among people who inject drugs.

The government does not have guidelines that address how hepatitis A and hepatitis E can be prevented through food and water safety.

Screening, care and treatment

Health professionals obtain the skills and competencies required to effectively care for people with viral hepatitis through schools for health professionals (pre-service education) and on-the-job training.

There are no national clinical guidelines for the management of viral hepatitis, but there are for the management of HIV, which include recommendations for coinfection with viral hepatitis.

The government does not have national policies relating to screening and referral to care for hepatitis B or hepatitis C.

People testing for both hepatitis B and hepatitis C register by name; the names are kept confidential within the system. Hepatitis B and hepatitis C tests are not free of charge for all individuals, but they are free of charge and compulsory for blood donors.

Publicly funded treatment for hepatitis B and hepatitis C is available to the entire population. The amount spent by the government on such treatment for hepatitis B and hepatitis C is not known.

The following drugs for treating hepatitis B are on the national essential medicines list or subsidized by the government: lamivudine and tenofovir. No drug for treating hepatitis C is on the national essential medicines list or subsidized by the government.

The Government of South Sudan welcomes assistance from WHO in one or more areas of viral hepatitis prevention and control (Annex C).
