

Honduras

Population (in millions) (2011)	7.8
Country classification (2012)	Lower-middle-income
Gross national income per capita (PPP int \$) (2011)	\$3820
Total health expenditure as % of GDP (2010)	6.75%
Per capita total health expenditure (PPP int \$) (2010)	\$262.79
Per capita government health expenditure (PPP int \$) (2010)	\$171.36
Life expectancy at birth (in years) (2009)	69
Human Development Index (2011)	0.625
Median age (in years) (2010)	21
Total fertility rate per woman (2010)	3.1

The Government of Honduras reports as follows.

National coordination

There is no written national strategy or plan that focuses exclusively or primarily on the prevention and control of viral hepatitis.

There is a designated governmental unit/department responsible solely for coordinating and/or carrying out hepatitis B-related activities. The name of this office was not provided. Information was not provided on how many staff members this office has. There are no people working full-time on hepatitis-related activities in any government agency/body.

The government has a viral hepatitis prevention and control programme that includes activities targeting the following specific populations: health-care workers (including health-care waste handlers) and prisoners.

Awareness-raising and partnerships

The government did not hold events for World Hepatitis Day 2012 and has not funded other viral hepatitis public awareness campaigns since January 2011.

The government does not collaborate with in-country civil society groups to develop and implement its viral hepatitis prevention and control programme.

Evidence-based policy and data for action

There is routine surveillance for viral hepatitis. There is a national surveillance system for acute hepatitis B but not for any type of chronic hepatitis.

There are standard case definitions for hepatitis. Deaths, including from hepatitis, are reported to a central registry. The percentage of hepatitis cases reported as "undifferentiated" or "unclassified" hepatitis is not known.

It is not known whether liver cancer cases are registered nationally. Cases with HIV/hepatitis coinfection are not registered nationally.

The government publishes hepatitis disease reports annually.

Hepatitis outbreaks are required to be reported to the government and are further investigated. There is adequate laboratory capacity nationally to support investigation of viral hepatitis outbreaks and other surveillance activities.

There is no national public health research agenda for viral hepatitis. Viral hepatitis serosurveys are conducted regularly; the target population is blood donors. Information was not provided regarding when the last serosurvey was carried out.

Prevention of transmission

There is no national policy on hepatitis A vaccination.

The government has not established the goal of eliminating hepatitis B.

Nationally, 98% of newborn infants in a given recent year received the first dose of hepatitis B vaccine within 24 hours of birth and 100% of one-year-olds (ages 12–23 months) in a given recent year received three doses of hepatitis B vaccine.

There is a national policy that specifically targets mother-to-child transmission of hepatitis B (Annex B).

There is a specific national strategy and/or policy/guidelines for preventing hepatitis B and hepatitis C infection in health-care settings. Health-care workers are vaccinated against hepatitis B prior to starting work that might put them at risk of exposure to blood.

There is a national policy on injection safety in health-care settings, which recom-

mends auto-disable syringes for therapeutic injections. Single-use or auto-disable syringes, needles and cannulas are always available in all health-care facilities.

Official government estimates of the number and percentage of unnecessary injections administered annually in health-care settings are not known.

There is a national infection control policy for blood banks. All donated blood units (including family donations) and blood products nationwide are screened for hepatitis B and hepatitis C.

There is no national policy relating to the prevention of viral hepatitis among people who inject drugs.

The government does not have guidelines that address how hepatitis A and hepatitis E can be prevented through food and water safety.

Screening, care and treatment

Health professionals obtain the skills and competencies required to effectively care for people with viral hepatitis through on-the-job training.

It is not known whether there are national clinical guidelines for the management of viral hepatitis. Information was not provided on whether there are national clinical guidelines for the management of HIV and whether they include recommendations for coinfection with viral hepatitis.

The government has national policies relating to screening and referral to care for hepatitis B and hepatitis C.

People testing for both hepatitis B and hepatitis C register by name; the names are kept confidential within the system. Hepatitis B and hepatitis C tests are free of charge for all individuals, and are not compulsory for members of any specific group.

It is not known whether publicly funded treatment is available for hepatitis B or hepatitis C.

No drug for treating hepatitis B or hepatitis C is on the national essential medicines list or subsidized by the government.

The Government of Honduras welcomes assistance from WHO in one or more areas of viral hepatitis prevention and control (Annex C).
