Median age (in years) (2010)	<b>17</b>
Total fertility rate per woman (2010)	<b>6</b>

The Government of Chad reports as follows.

## National coordination

There is no written national strategy or plan that focuses exclusively or primarily on the prevention and control of viral hepatitis.

There is a designated governmental unit/department responsible solely for coordinating and/or carrying out viral hepatitis-related activities. It has six staff members. There are no people working full-time on hepatitis-related activities in any government agency/body.

The government does not have a viral hepatitis prevention and control programme that includes activities targeting specific populations.

## Awareness-raising and partnerships

The government held events for World Hepatitis Day 2012 and has funded other viral hepatitis public awareness campaigns since January 2011 (Annex A).

The government collaborates with the following in-country civil society groups to develop and implement its viral hepatitis prevention and control programme: Association SOS Hepatite Chad and Association Soleil Levant.

## Evidence-based policy and data for action

There is no routine surveillance for viral hepatitis.

There are standard case definitions for hepatitis. Hepatitis deaths are not reported to a central registry. The percentage of hepatitis cases reported as "undifferentiated" or "unclassified" hepatitis is not known.

Liver cancer cases and cases with HIV/hepatitis coinfection are not registered nationally.

The government does not publish hepatitis disease reports.

Hepatitis outbreaks are required to be reported to the government and are further investigated. There is adequate laboratory capacity nationally to support investigation of viral hepatitis outbreaks and other surveillance activities.

There is no national public health research agenda for viral hepatitis. Viral hepatitis serosurveys are not conducted regularly.

## Prevention of transmission

There is no national policy for hepatitis A vaccination.

The government has not established the goal of eliminating hepatitis B.

It is not known what percentage of newborn infants nationally in a given recent year received the first dose of hepatitis B vaccine within 24 hours of birth or what percentage of one-year-olds (ages 12–23 months) nationally in a given recent year received three doses of hepatitis B vaccine.

There is no national policy that specifically targets mother-to-child transmission of hepatitis B.

There is no specific national strategy and/or policy/guidelines for preventing hepatitis B and hepatitis C infection in health-care settings.

There is a national policy on injection safety in health-care settings, which recommends single-use and auto-disable syringes for therapeutic injections. Single-use or auto-disable syringes, needles and

cannulas are always available in all health-care facilities.

Official government estimates of the number and percentage of unnecessary injections administered annually in health-care settings are not known.

There is a national infection control policy for blood banks. All donated blood units (including family donations) and blood products nationwide are screened for hepatitis B and hepatitis C.

There is no national policy relating to the prevention of viral hepatitis among people who inject drugs.

The government does not have guidelines that address how hepatitis A and hepatitis E can be prevented through food and water safety.

## Screening, care and treatment

Health professionals obtain the skills and competencies required to effectively care for people with viral hepatitis through schools for health professionals (pre-service education) and postgraduate training.

There are no national clinical guidelines for the management of viral hepatitis. There are national clinical guidelines for the management of HIV, which include recommendations for coinfection with viral hepatitis.

The government does not have national policies relating to screening and referral to care for hepatitis B or hepatitis C.

People testing for both hepatitis B and hepatitis C register by name; the names are kept confidential within the system. Hepatitis B and hepatitis C tests are not free of charge and are not compulsory for members of any specific group.

Publicly funded treatment is not available for hepatitis B or hepatitis C.

The following drug for treating hepatitis B is on the national essential medicines list or subsidized by the government: lamivudine. No drug for treating hepatitis C is on the national essential medicines list or subsidized by the government.

The Government of Chad welcomes assistance from WHO in one or more areas of viral hepatitis prevention and control (Annex C).
